CE

NEW - In Cooperation with Rosenheim - The Klaes CE-Generator

Why collect complex rules of the Construction Products Regulation in a time-consuming procedure when there is an easier way?

Discover the brand-new Klaes CE-generator which has been developed in connection with ift Rosenheim. Herewith, you can create your documents specified by the Construction Products Regulation simply by pressing a button. The Klaes CE-generator is a solution module that you can buy as of Version 7.8.

You will be surprised how easy it is to create the required documents. Enter your offers or orders as usual. Per click, an inquiry is going to be sent to a database of the Institute for Window Technology Rosenheim (ift).

The inquiry referring to the identifiers for tender specification and CE-identifier, which are needed for this construction, is going to be analysed by a software. The identifiers are determined and resent to the Klaes-window construction program as PDF-file. Thus, the documents necessary for the Construction Products Regulation are available for the window manufacturer.In the window construction program, the PDF-file is automatically saved in the project directory. ift safes the query result on the WEB-Server for 10 years,too.

At a glance:

☐ CE Analysis and allocation of the performance features made by ift Rosenheim as notified body according to Construction Products Regulation

☐ CE Maintainance of master data for the creation of tender specifications by ift

☐ CE Description of all constructions

☐ CE Output of a detailed PDF-file

☐ CE Transfer of the PDF-file to the Klaes-window construction program

☐ CE Archiving for 10 years
